NAME

xchm - Compiled HTML Help (CHM) file viewer for X.

SYNOPSIS

xchm [OPTIONS] [FILE]

DESCRIPTION

xchm is a viewer for Compiled HTML Help (CHM) files. It, can show the contents tree if one is available, print the current page and do the usual history stunts. It allows you to change fonts and search for text in all the pages of the file, or in the pages' titles.

xchm does not handle Javascript in the book.

OPTIONS

- c, --contextid=<num>
context-Id to open in file, requires that a file be specified.
- h, --help
displays help message and exit.
