Содержание

- Знакомство с KDevelop
- Сеансы и проекты: основы KDevelop
 - Терминология
 - Создание сеанса и импорт существующих проектов
 - Настройка приложения в качестве второго проекта
 - Создание проекта с нуля
- Working with source code
 - Tools and views
 - Exploring source code
 - Navigating in source code
 - Writing source code
 - Modes and working sets
 - Some useful keyboard shortcuts
- Code generation with templates
 - Creating a new class
 - Creating a new unit test
 - Managing templates
- Building (compiling) projects with custom Makefiles
 - Building individual Makefile targets
 - Selecting a collection of Makefile targets for repeated building
 - What to do with error messages
- Running programs
 - Setting up launches in KDevelop
 - Some useful keyboard shortcuts

- Debugging programs
 - Running a program in the debugger
 - Attaching the debugger to a running process
 - Some useful keyboard shortcuts
- Setting up a new project from scratch
- Working with version control systems
- Customizing KDevelop
 - Customizing the editor
 - Customizing code indentation
 - Customizing keyboard shortcuts
 - Customizing code auto-completion
- Appendix: A list of all available tools
- Appendix A: Building KDevelop from Sources
- Appendix: Pages that still lack documentation
- --- old content of the manual ---
- Getting started
- Getting started: A small CMake tutorial
- Plugins: Code Generation
